SASAKI SHINYA****(54) AUTOMATIC AUCTION PROCESSING SYSTEM**

(57)Abstract:

PURPOSE: To distribute a remaining number in short time in auction for remain, and to shorten auction processing time so as to speed up an auction processing.

CONSTITUTION: A buyer generates a proposal signal by depressing a proposal key B in a proposal machine K. On the other hand, the cost of a listed article is displayed on a bulletin board D so as to raise cost in an auction operation device S. When the total proposal number which a total proposal number calculation means 50C calculates becomes one while cost is raised, a cost stop means 50E stops the rise of cost and one buyer transmitting the proposal signal which a proposal detection means 50A detects is considered to bid the listed articles for a purchased number which the buyer designates so as to be processed. When there is the remaining number, a remaining number bidding display means 50I displays one buyer who is stored in a transmission absence order storage means 50H and who is slow in setting the transmission of the proposal signal from presence to absence on the buyer display part 75 of the bulletin board D by considering him to be a person who bids the listed articles for the purchased number which the buyer designates. The remaining number of the listed articles is bidding-processed for the buyer.

LEGAL STATUS

[Date of request for examination]	04.04.1996
[Date of sending the examiner's decision of rejection]	21.10.1997
[Kind of final disposal of application other than the examiner's decision of rejection or application converted registration]	
[Date of final disposal for application]	
[Patent number]	
[Date of registration]	
[Number of appeal against examiner's decision of rejection]	
[Date of requesting appeal against examiner's decision of rejection]	
[Date of extinction of right]
